

Zet Health Website Assignment

Thank you for completing Round 1. As the next step, we'd like you to work on a short full-stack assignment to showcase your MERN skills

Problem Statement

Build a Healthcare Web Application where users can:

1. Order Medicines – Search & add medicines to cart, place an order.
2. Book Pathology Lab Test (Home Sample Collection) – Browse available lab tests, book a home collection slot.
3. Book Radiology Tests in Labs – Search available labs, pick a slot, and confirm booking.

Functional Requirements

Medicine Ordering

- Search medicines from a predefined dataset (seed DB with 50–100 sample medicines, scraped or mocked).
- Add to cart, view cart, place order.
- Order confirmation page.

Pathology Test Booking

- Show list of pathology tests (blood test, thyroid test, diabetes profile, etc.).
- User selects a home **sample collection** slot (date + time).
- Confirmation page with booking ID

Radiology Test Booking

- Show list of available labs with radiology tests (X-Ray, MRI, CT scan etc.).
- User selects lab + available slot.
- Booking confirmation page.

○

API Requirements

- `GET /medicines` – List medicines with search/filter.
- `POST /orders` – Place medicine order.
- `GET /tests/pathology` – List pathology tests.
- `POST /bookings/pathology` – Book pathology test with slot.
- `GET /tests/radiology` – List radiology tests with labs.
- `POST /bookings/radiology` – Book radiology slot.

Tech Stack

- **Frontend:** React (with hooks / Redux / Context API)
- **Backend:** Node.js + Express.js
- **Database:** MongoDB
- **Website:** User Vercel/Netlify for hosting via Github

Medicine Data

- **10–20 medicines** is sufficient.
- Include key fields:
 - Name
 - Brand
 - Form (tablet, syrup, injection, etc.)
 - Dosage
 - Price
 - Stock availability
 - Description / short usage info

Pathology & Radiology Tests

- **Pathology Tests:** 10–20 common tests
 - Example: Blood Sugar, CBC, Lipid Profile, Thyroid Profile, Vitamin D

- Fields: Test Name, Price, Sample Type, Estimated Result Time
 - **Radiology Tests:** 5-10 common tests
 - Example: X-Ray Chest, MRI Brain, CT Abdomen, Ultrasound Abdomen
 - Fields: Test Name, Price, Lab Name, Available Slots
-

Other Expectations

- **DB Schema:** Define clear schema for Medicines, Orders, Tests, Bookings.
- **Frontend:**
 - Simple navigation (Medicines | Pathology Tests | Radiology Tests).
 - Clean UI with forms for booking/order.
- **Readme:** Clear setup instructions.

No need to work on following modules

- User authentication (Sign up, Login).
- Admin dashboard to add new medicines/tests/labs
- Payment integration

Deliverables

1. **GitHub Repo named `zetweb-<yourname>`** with
 - `/frontend` → Website
 - `/backend` → Node.js APIs (Refer API Requirement), MongoDB models
 - `/README.md` → setup instructions, sample test cases, mock data
 - `/data` → JSON files for sample orders & lab test reports
2. **Core flows working:**
 - User able to add medicines to cart and get booking confirmation
 - User able to book pathology or radiology tests with booking confirmation
 - Search functionality to search medicines or tests
 - Home page with navigation, search and widgets for medicine, pathology and radiology

Refer websites like Tata1mg or Pharmeasy or practo.

Timeline

- You have 4 days to complete the assignment.
- Suggested breakdown:
 - Day 1 → Setup MERN project + DB + mock data
 - Day 2 → Backend APIs (orders, recommendations, insights)
 - Day 3 → WhatsApp integration (Twilio) OR mock React chat UI
 - Day 4 → Testing, polish, README
 - Day 5 → final submission

Evaluation Criteria

Completeness of Features (30%)

- core workflows (medicine order, pathology booking, radiology booking)

Code Quality & Structure (25%)

- Is the code modular, readable, and well-organized?
- Proper use of React/Express best practices.

Database Design (15%)

- Clear schema design with appropriate relationships.
- Efficient use of MongoDB.

Frontend UI/UX (15%)

- Clean navigation, intuitive booking/order experience.
- Basic responsiveness.

Documentation & Deployment (15%)

- Clear setup instructions.
- API documentation.
- Bonus points for deployed demo.

Submission Instructions

- Push code to a **public GitHub repo** and share the link with us.
- Include:
 - Setup/run instructions

- Data sources used
 - Approximate hours spent
- (Optional) Share a short 2–3 min demo video walkthrough
